

When used with Arduino, the ICSP 2x3 connector has to be soldered to the board. In case the module has to be used with olimexino the 2X3 connector is not soldered, instead solder 1x1 pin header and connect +5V and GND to Olimexino +5V and GND.

The Irdroid module is designed, using the Irdroid's optical amplification technique, which combines the power of 2 IR Leds and provides optical signal amplification at 940nm wavelength.

Open Source Hardware, designed in Plovdiv, Bulgaria by Hardware Group LTD.
